Assessment Booklet

ICTCBL246 & ICTCBL247

Install, Maintain and Modify Customer Premises Communications Cabling:

ACMA Restricted Rule & Open Rule

Student Name: (Not provided)

TASK 1 – Oral Assessment Questions (Assessor Checklist)

Oral Assessment Question	Yes	No	Comments
1. What are the major risks in performing this work?			Enter comments.
2. What PPE should be used for this type of work?			Enter comments.
3. How might cable be damaged and how can this be avoided?			Enter comments.
4. What are the consequences of damaged cable for the customer?			Enter comments.
5. Show how the major components of this installation are represented on the plan			Enter comments.
6. How will the aerial support structures and cable be secured?			Enter comments.
7. Identify and check on the regulatory requirements for work on your assigned location			Enter comments.
8. Identify and check on cabling and general infrastructure needs and develop a strategy to manage any specific needs			Enter comments.
9. Take steps to manage and report safety hazards			Enter comments.
10. Take steps to manage remote power feed			Enter comments.
11. Install cable support systems including catenary supports			Enter comments.
12. Place and secure cables on support structures and building faces for both internal and external locations			Enter comments.
13. Demonstrate work practices which avoid cable damage and placement of cable and terminating equipment in compliance with manufacturer specification			Enter comments.
14. Arrange cables to ensure ease of access			Enter comments.
15. Read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations			Enter comments.
16. Comply with all WHS requirements and work practices			Enter comments.
17. Label all cables and allow sufficient space for access to cables			Enter comments.
18. Complete all installation tasks to standards prescribed by industry regulations			Enter comments.
19. Install earthing where required and ensure TCR and CES wires meet legislative standards			Enter comments.
20. Complete all work observing industry standard S009:2013			Enter comments.

Final Result (Task 1):

○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name:	Enter assessor name...
Assessor Signature:	
Date:	04-04-2026

TASK 2 – Oral Assessment Questions (Assessor Checklist)

Oral Assessment Question	Yes	No	Comments
1. Name three hazards for this type of termination work?			Enter comments...
2. What separations should be maintained between cable terminations and LV cables?			Enter comments...
3. What requirements apply the installation of an MDF?			Enter comments...
4. Describe the regulations that apply to cable installation			Enter comments...

Evidence of Performance

Task	Yes	No	Comments
5. Perform a simple cable termination at termination module according to manufacturer's specifications and without damage to conductors			Enter comments
6. Terminate systems at both distributor and outlet locations and test earthing			Enter comments
7. Apply recommended earthing in accordance with standard S009:2013 including TCR/CES earth wire			Enter comments
8. Observe colour coding when terminating			Enter comments
9. Install and terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater			Enter comments
10. Terminate one non-jumperable distributor and a patch panel			Enter comments

Task	Yes	No	Comments
11. Terminate at least one 50 pair, one 4 pair and one Ethernet cables including accurate completion of installation records, drawing alterations and compliance forms			Enter comments
12. Read and interpret drawings relate to cable layouts, outlet location, cable coding system, and identifiers and distributor locations and test for integration with existing systems			Enter comments
13. Label cable pairs and earthing system, recording details in cable record and complete a TCA form			Enter comments
14. Interpret and apply relevant legislation, code's, regulations and standards			Enter comments
15. Comply with all WHS requirements and work practices			Enter comments
16. Visually inspect new work to check for correct colour coding and sequencing and correct separations			Enter comments
17. Conduct system ring in accordance with manufacturer specifications			Enter comments

Final Result (Task 2):

○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name: Enter assessor name...

Assessor Signature:

Date: 04-04-2026

TASK 3 – Oral Assessment Questions (Assessor Checklist)

Oral Assessment Question	Yes	No	Comments
1. Name three potential faults on a cable system			Enter comments...
2. Your assessor will hand you a testing device. What is the fault that the tester you are holding detects?			Enter comments...

Oral Assessment Question	Yes	No	Comments
3. What steps can you take to rectify this fault?			Enter comments...
4. What steps can a cabler take to avoid this fault when installing cable?			Enter comments...

Evidence of Performance

Task	Yes	No	Comments
5. Read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations for the purpose of locating system earthing			Enter comments
6. Update plans with installation details and system plans			Enter comments
7. Complete a TCA for the cabling system			Enter comments
8. Label cable pairs accurately and according to regulations			Enter comments
9. Inspect cabling for separations and compliance with regulations			Enter comments
10. Make adjustments when cabling			Enter comments
11. Interpret and apply relevant legislation, codes, regulations and standards			Enter comments
12. Supervise cabling work of another cabler by checking their work for compliance with in accordance with standard S009:2013			Enter comments

Final Result (Task 3):

○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name: Enter assessor name...

Assessor Signature:

Date: 04-04-2026

TASK 4 – Student Answers with Assessor Checkboxes

1. What does the ACMA provide for cablers?

Student Answer: (No answer)

2. Describe the use of simple cabling continuity test equipment?

Student Answer: (No answer)

3. What does the term regulatory environment mean in cabling?

Student Answer: (No answer selected)

4. Describe the typical environment in which registered customer cabling occurs

Student Answer: (No answer selected)

5. Give examples of the types of equipment used in cabling

Student Answer: (No answer selected)

6. Identify legislation, codes of practice and other formal agreements

Student Answer: (No answer selected)

7. List the materials used for telecommunications cabling

Student Answer: (No answer selected)

8. Describe documentation and records required when cabling

Student Answer: Part A: (No answer)
Part B: (No answer)

9. List some steps to make using equipment safer

Student Answer: (No answer selected)

10. What does the earthing systems and protection strategies include?

Student Answer: (No answer selected)

11. Choose six specific WHS actions

Student Answer: (No answer selected)

12. Test methods and performance requirements - True or False?

Student Answer: (No answer selected)

13. Typical issues and challenges on site

Student Answer: (No answer selected)

14. Mandatory workplace records required

Student Answer: (No answer selected)

15. Applications that cabling contribute

Student Answer: (No answer selected)

16. Define where integral bearer wires are required

Student Answer: (No answer selected)

17. Responsibilities for supervising communications installation works

Student Answer: (No answer selected)

ASSESSMENT TASK 4 – ASSESSOR CHECKLIST

Additional sheet may be used if required by Instructor.

Performance indicators	Satisfactory		Comments
Did the candidate:	**Yes**	**No**	
Research answers for each question?	☐	☐	Comments...
Answer questions confidently and correctly?	☐	☐	Comments...

Assessor's Feedback (Task 4):

Enter your feedback here...

Final Result (Task 4): ○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name:	Enter assessor name...
Assessor Signature:	
Date:	04-04-2026

TASK 5 – Student Answers with Assessor Checkboxes

1. As a general requirement, a cabling product shall be fit for:

Student Answer: (No answer selected)

2. The standards contains normative and informative elements. Normative elements (mandatory requirements) are indicated by the words shall or shall not. The word 'shall' refer to:

Student Answer: (No answer selected)

3. A registered cabler shall not make any connection to the carrier side of the MDF unless:

Student Answer: (No answer selected)

4. Telecommunications cable concealed in walls, floors or ceiling shall be permanently separated from LV cables by:

Student Answer: (No answer selected)

5. The MDF is normally supplied and installed by the customer's cabling provider. Who supplies, installs and maintains the lead-in connection modules on the MDF?

Student Answer: (No answer selected)

6. The network boundary of a carrier's network in a domestic residence is:

Student Answer: (No answer selected)

7. The cabler does not need to consider EPR where:

Student Answer: (No answer selected)

8. Cabling products shall meet the requirements of:

Student Answer: (No answer selected)

9. In a customer's premises where the lead-in cabling terminates on one or more telephone sockets, the registered cabler may connect customer cabling:

Student Answer: (No answer selected)

10. Any opening where customer cabling runs in or through a fire isolating wall floor or riser shaft shall:

Student Answer: (No answer selected)

11. When running jumpers on an MDF, a registered cabler:

Student Answer: (No answer selected)

12. A customer cable that contains electrically conductive elements and which runs alongside or crosses a multi-core cable carrying an HV circuit shall be separated for its entire length from the multi-core cable by:

Student Answer: (No answer selected)

13. A telecommunication carrier is defined as:

Student Answer: (No answer selected)

14. The definition of lead-in cabling is:

Student Answer: (No answer selected)

15. Non-telecommunications service may use the same cable as telecommunications services that are connected to the PSTN, provide that:

Student Answer: (No answer selected)

16. If any service cause harm or interference to the public telecommunication network, the carrier may:

Student Answer: (No answer selected)

17. The frame of the MDF shall be suitable for mounting the carrier's standard terminating modules:

Student Answer: (No answer selected)

18. The buildings entry and lead-in entry facilities for public telecommunications network shall be provided by:

Student Answer: (No answer selected)

19. A customer cable that contains electrically conductive elements and which runs alongside or crosses a single-core cable carrying an HV circuit shall be separated for its entire length from the single-core cable by a distance of at least:

Student Answer: (No answer selected)

20. The buildings MDF shall be supplied and installed by:

Student Answer: (No answer selected)

21. Where cross-connections are made by means of jumpers, the records shall be:

Student Answer: (No answer selected)

22. The termination modules for termination of the cabling on the customer's side of the MDF shall be supplied by:

Student Answer: (No answer selected)

23. The buildings MDF shall be installed in a position:

Student Answer: (No answer selected)

24. A cabling provider is deemed to be authorised to make a connection on the carrier side of the MDF if, and only if:

Student Answer: (No answer selected)

25. The building MDF is not to be installed in:

Student Answer: (No answer selected)

26. Knowledge evidence: secure cables with appropriate fasteners. When fastening and tying up loose cables inside a NODE, what are the two equipment you must use?

Student Answer: (No answer selected)

27. Knowledge evidence: basic electrical principles. What is Insulation?

Student Answer: (No answer selected)

28. Knowledge evidence: cable screening types.

Student Answer: Type 1: (No answer)
Type 2: (No answer)
Type 3: (No answer)
Type 4: (No answer)

Assessor's Feedback (Task 5):

Enter your feedback here...

Final Result (Task 5): ○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name:	Enter assessor name...
Assessor Signature:	
Date:	04-04-2026

TASK 6 – Student Answers with Assessor Checkboxes

1. A customer has requested that you install two additional telephone points. From where can a registered cabler perform customer cabling work?

Student Answer: (No answer selected)

2. You will be installing cabling in a large house. You decide to hire unregistered assistants to help finish the job. Under what circumstances can a person perform cabling work without being registered?

Student Answer: (No answer selected)

3. Where a shared housing is used for LV terminations and telecommunications cabling, the minimum separation required between LV and the adjacent telecommunications cabling or its terminations is:

Student Answer: (No answer selected)

4. When installing telecommunications outlets near power points, you must ensure:

Student Answer: (No answer selected)

5. While running customer cables you find pipes containing corrosive liquids and flammable gas. These services are classified as:

Student Answer: (No answer selected)

6. You are installing data cables within an existing duct, the duct has various other services in different channels. Which service should you avoid and why?

Student Answer: (No answer selected)

7. LV falls within which of the following voltage limits:

Student Answer: (No answer selected)

8. A customer has asked you to install a data cable, this data cabling shall be installed:

Student Answer: (No answer selected)

9. In a domestic premises where the lead-in cable terminates in a Network Termination Device (NTD) from where the cable is extended into the house, the network boundary will be:

Student Answer: (No answer selected)

10. In a domestic premises, connected to the NBN, the lead-in fibre optic cable terminates in an Optical Network Termination Device (ONTD), the network boundary will be at:

Student Answer: (No answer selected)

11. The mandatory requirements in ASICA S009 include the word:

Student Answer: (No answer selected)

12. Telecommunications cables, incorporating electrically conductive elements, may be accommodated in the same duct or trunking as hazardous electrical services provided that:

Student Answer: (No answer selected)

13. Customer cables, incorporating electrically conductive elements, installed as surface cabling in ceilings or in concealed locations such as wall cavities without a conduit enclosure shall be separated for their entire length from any LV services by:

Student Answer: (No answer selected)

14. A hole has been bored in a concrete slab giving access to a computer room into which you wish to install data cables, incorporating conductive elements. The hole is 450mm in diameter. A multi-core HV cable has already been installed through the hole. The data cables shall be separated from this multi-core HV cable by:

Student Answer: (No answer selected)

15. When installing a customer cable, incorporating electrically conductive elements, on a cable tray you notice a single core HV cable is already installed on the cable tray. Your customer cables shall be separated from single core HV cables by:

Student Answer: (No answer selected)

16. Within the same enclosure, the conductors and terminations of telecommunication cable shall be separated from those of LV cables by:

Student Answer: (No answer selected)

17. Industry standards for telecommunications equipment or cables are developed by:

Student Answer: (No answer selected)

18. Installation, maintenance and repair of customer cabling on the customer side of the network boundary must be undertaken by:

Student Answer: (No answer selected)

19. Additions or alterations to an existing installation of customer cabling must comply with:

Student Answer: (No answer selected)

20. Safety Extra-Low Voltage (SELV) falls within which of the following limits:

Student Answer: (No answer selected)

21. A hazardous service is:

Student Answer: (No answer selected)

22. Telecommunications customer cabling is:

Student Answer: (No answer selected)

23. The scope of AS/CA S009 with reference to the safety requirements for telecommunications equipment used in customers' premises is necessary to:

Student Answer: (No answer selected)

24. Pipes containing corrosive or flammable liquid or gas, or water at a temperature in excess of 60 degrees Celsius are classified as:

Student Answer: (No answer selected)

25. Internal communication and general building control services may use pairs in the same cable as telecommunications services that are connected to the public network, provided that:

Student Answer: (No answer selected)

26. Within the same enclosure, the conductors and terminations of telecommunications cables must be separated from those of HV cables by:

Student Answer: (No answer selected)

27. The conductors and terminations of telecommunications cables must be separated from non-electrical hazardous services by a minimum distance of:

Student Answer: (No answer selected)

28. Telecommunications sockets installed in wet areas must:

Student Answer: (No answer selected)

29. The minimum height of aerial telecommunications cables on customers' premises, above ground in non-trafficable areas is:

Student Answer: (No answer selected)

30. The minimum height of aerial telecommunications customer cables above any public road or footpath is:

Student Answer: (No answer selected)

31. Aerial telecommunications cables must not be attached to poles carrying aerial power lines, where the voltage on the power lines exceeds:

Student Answer: (No answer selected)

32. Aerial telecommunications cables must not be attached to a pole under the following circumstances:

Student Answer: (No answer selected)

33. You have to install customer cabling and a distributor to a small lift motor room on the rooftop of a high-rise building. To get your cable to the room you must pass a number of services associated with the building operations. Which services would you regard as hazardous and what is the minimum segregation:

Student Answer: (No answer selected)

34. In a shopping centre incorporating an MDF, intermediate distribution frames and other distributors feeding telecommunications services into the various shops, the network boundary for each customer will be:

Student Answer: (No answer selected)

35. Customer equipment, pits, access holes or cabling joints should not be placed in a location where the EPR may exceed:

Student Answer: (No answer selected)

36. To install a customer cable between floors you have to cable between office partitions, walls, ceiling spaces and through the riser shaft between floors. All openings you made shall be suitably fire stopped where customer cables are run:

Student Answer: (No answer selected)

37. You are contracted to install telecommunications customer cables for a large mining company. The mining company has agreed to supply all the cable and has marked the route of the new cable on a plan for you to follow. You notice the plan also indicates the same route is used for delivering lighting and power to some areas of the mine. Which part of the cable route is acceptable for use with the customer cables:

Student Answer: (No answer selected)

38. Jumpering at the main distribution frame:

Student Answer: (No answer selected)

39. In customer premises incorporating a main distribution frame, the carrier is exclusively responsible for installing exchange line services to:

Student Answer: (No answer selected)

40. In a tray support system, joints in the tray shall:

Student Answer: (No answer selected)

41. The distribution frame installed at the network boundary must be suitable for mounting the standard terminating system used by the carrier:

Student Answer: (No answer selected)

42. For the network boundary enclosure the minimum clearance between any enclosed termination equipment and the inside face of the door is:

Student Answer: (No answer selected)

43. For a wall mounted MDF the height of the uppermost terminal shall not exceed:

Student Answer: (No answer selected)

44. The height above the floor level of the lowest terminal or module on an outdoor MDF shall not be less than:

Student Answer: (No answer selected)

45. The records in any distributor must be:

Student Answer: (No answer selected)

46. You are to install a small backbone cabling system to a new six tenant commercial development. All your cable and other cabling products which you will install for connection to the carrier's network so that future tenants may rent carrier services shall be installed:

Student Answer: (No answer selected)

47. You have been asked to install an optical fibre cable between two buildings, the building owners inform you that is an existing 100mm orange conduit containing several LV cables which runs between the two buildings. Can you use this conduit?

Student Answer: (No answer selected)

48. When installing customer cabling in a ceiling space, you notice a low-voltage (LV) power cable. What is the minimum separation required between the customer cable and the LV cable?

Student Answer: (No answer selected)

49. You have been asked to replace a length of faulty Cat 5 data cable installed in an existing white conduit running underground between two buildings. What type of replacement cable must you use?

Student Answer: (No answer selected)

50. When installing a telephone cable in the ceiling of a house you find you need to cross over several LV mains cables. You must ensure that:

Student Answer: (No answer selected)

Assessor's Feedback (Task 6):

Final Result (Task 6): ○ **Satisfactory (S)** ○ **Not Satisfactory (NS)**

Assessor Name:	Enter assessor name...
Assessor Signature:	
Date:	04-04-2026

Assessment Competency Record

This form is to be completed by the assessor and used as the final record of the student competence in these discipline. All student submissions including any associated documents and checklists are to be attached to this cover sheet before placing on the students file.

Student's Name	**(Not provided)**
Assessor's Name	Enter assessor name...
Assessment Site	Enter assessment site...
Assessment Date/s	04-04-2026

Assessor Declaration				
In completing this assessment, it is confirmed that the participant has demonstrated all unit outcomes through consistent and repeated application of skills with competent performance.				
Evidence Is Confirmed as:	☐ Valid	☐ Sufficient	☐ Current	☐ Authentic

Please attach the following documentation to this form		**Result**
Assessment Task 1	☐ Observation	S / NS
Assessment Task 2	☐ Observation	S / NS
Assessment Task 3	☐ Observation	S / NS
Assessment Task 4	☐ Knowledge Questions	S / NS
Assessment Task 5	☐ Questions and Answers	S / NS
Assessment Task 6	☐ 50 Multi Choice Questions	S / NS

FINAL ASSESSMENT RESULT:

☐ Competent (C)

☑ Not Yet Competent (NC)

Attempt	Date	Assessor's Feedback:
1	dd-mm-yyyy	Type feedback...
2	dd-mm-yyyy	Type feedback...
3	dd-mm-yyyy	Type feedback...

Assessor: I declare that I have conducted a fair, valid, reliable and flexible assessment with this student, and I have provided appropriate feedback.	**Signature:** **Date:** _____
Student: I declare that I accept the assessment competency outcome and consider the feedback of my assessor positively. I also declare that the work submitted is my own.	**Signature:** **Date:** 2026-04-04
